A Healthier Home

SED can promise you a central vacuum system that is designed to remove a dramatically greater volume of allergens and dirt from your home. With up to five times the suction power of uprights, our systems provide you with higher quality air and a cleaner living environment.

Affordable

Compared with a high-quality upright, central vacuum systems are within the same price range, and provide you with more options and more accessories.

The Cyclonic Difference

SED uses central vacuums that feature true cyclonic action, giving you a system that maintains maximum performance and power at all times.

Quiet and Convenient

With the main unit located in a utility room or garage, cleaning your home just got much quieter. Inlets and vacpans are located throughout your home so large areas are easier to clean without having to carry around a heavy upright. Save your back, your time, and your hearing by cleaning with a central vacuum system.

Options & Accessories

With a wide variety of options and accessories available, SED will provide you with a solution that meets all of your cleaning needs. From the garage and basement to hardwood floors and stairs—we've got you covered.

"You have been just wonderful to work with, and it is such a comfort knowing this is all coming together successfully."
