Structured Wiring

Structured wiring combines *all* of the communications wiring in your home into one system. This can include wiring for a home network, telephone, video, audio, alarms, paging, remote control and anything else you choose to add. SED designers can help you create a customizable and affordable solution specifically for your needs.

Overall Value

Homes built today without an upgraded wiring system will not be able to accommodate the demands of new technologies. As such, they will not retain value as strongly as those built with a solid infrastructure. Structured wiring adds value to your home and makes it more attractive to future buyers.

Current and Future Technology

SED can provide you with a connected home by designing a structured wiring system that ensures optimum access to all of your evolving home technology needs. Ten years ago Ethernet was rarely used, whereas today it's considered mainstream. What new technologies will be introduced in the next ten years? Be prepared for anything with a comprehensive structured wiring system.

Ease of Access

SED offers you many outlet options throughout your home optimized for accessibility in any desired location. With numerous conveniently located wall plates, cords are no longer an unsightly and dangerous mess running along the floor.

"SED gave us great customer service and it has continued anytime we've had a question."
