Music - Anywhere, Anytime

Fill your home with sound with the touch of a button. Your sound system no longer needs to consist of bulky speakers and wires running along the floor. Our experts can create a sound system that works with your home, both functionally and aesthetically.

Ease of Use

You can easily pilot the sound system for your entire home with user-friendly controls. We take the time to make sure you feel comfortable navigating your sound system and we're always available if you have questions later.

iPod Friendly

All of our distributed audio systems are iPod friendly, from complete control of your iPod to simply using it as a source of music.

Individual Room Control

We offer individualized room control—allowing you to listen to your favorite music in one room, while other family members listen to their music elsewhere in the home. You can switch between different sources (CDs, iPod, radio, etc.) in multiple rooms with complete control.

Affordable & Scalable

All of our systems are scalable to meet all of your home audio needs. Whether you want audio in two rooms or every room in your house, we can design a system that will fill your home with all of your favorite music.

"I can now have music coming out of the ceiling, the walls, and even outside. I can play everything from my record player to my ipod all on one central sound system."
