Peace of Mind

Our security systems are constantly on guard. We use advanced technology to protect your home, your valuables and, most importantly, your family.

24-Hour Monitoring

SED offers 24-hour monitoring services to ensure that someone is always watching over your home and family. If your system alarm is tripped, your local police, fire, or emergency services will be alerted immediately.

Easy to Use

SED installs LCD security keypads that are intuitive and easy to use. With a simple four digit code, your system will be armed and your family protected.

Flexibility

There are countless options to make your security system as flexible as you need it to be. A SED specialist will work with you to design the ideal system for you—from cameras with recording capabilities to a security system that will page you if something has gone wrong.

Environmental Sensors

SED also provides a variety of environmental sensors that work with your security system. These include smoke detectors, carbon monoxide detectors, water sensors, and more—guaranteeing that your family is safe from harm.

“SED was able to answer all our questions and the system they came up with was even better than what we had in mind at a very reasonable price. We can't thank them enough.”
